Business Domain
Finance, Payments and POS

Project Type
Solution

Resilient and Secure Mobile & Online Banking Software for a Leading European Financial Company

Client

A leading financial company based in Europe.

Project

Developing a resilient and sustainable banking system comprising three versions: the admin version for banking control, the web version, and the user version.

Objective

The Client aimed to create an inclusive, resilient, and sustainable online banking system with mobile and web versions.

Team Reinforcement

The Client required additional resources to develop and scale an existing system. An Offshore Dedicated Team® (ODT®) team completed the project in just one year. The Client's team was reinforced by nine experts: a Solution Architect, 2 Flutter developers, 2 Node developers, a PHP developer, a Business Analyst, a Team Lead, and a Project Manager.

Challenge

The integration with other payment systems and credit institutions required significant time and was complex due to a lack of proper documentation and an outdated technology stack.
The banking system had to accept payments through terminals and cell phones and maintain integration with existing services and leasing systems.

In just a year, the challenging integration with 3rd-party systems was solved, and the Client received a stable banking application with mobile and web versions.

Quick Facts

✓ The admin functionality and plugins for CMS payment systems were developed entirely from scratch

✓ Integration with various payment systems, registers, and credit institutions

✓ Facilitates payments via terminals and cell phones

Technologies

Flutter mobile / Node JS / PHP / GetX state management / MVC Architecture

Solution

★ **01**

An inclusive, resilient, and sustainable online banking system with mobile and web versions.

★ **02**

Safe deposit and loan-taking processes include secure encoding and two-factor authentication (2FA).

★ **03**

NeoBank can integrate with various payment systems, registers, and credit institutions. Additionally, it can facilitate payments through terminals and cell phones.

Client Reference

"

The Intetics team demonstrated professionalism and high technical expertise while adhering to our strict timeframe and addressing all the requirements.

Benefits and Results

★ An inclusive, resilient, and sustainable system designed to streamline mobile and online banking.

★ Secure encoding and two-factor authentication (2FA) enhances the safety of both deposit and loan-taking processes.

★ Integration with various payment systems, registers, and credit institutions.
